DETAILED ACTION

Claim Rejections - 35 USC § 102

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 21-28 are rejected under 35 U.S.C. 102(b) as being anticipated by Dan Bensky et al., Hson-Mou Chang et al., Chu et al., CN 1047806 or EP 441278.

Applicant argues that the references do not expressly state that the extracts have a molecular weight of at least 100 kilodaltons, that they comprise about 5 % protein and that the protein has an amino acid content of about 20 % hydroxyproline but this is inherent since the extracts come from the same plant. The references teach using standard techniques for purification and thus the extracts will have the same molecular weight as in applicant's invention. Applicant has not established that the products in the references and that of the instant claims are allegedly distinct from each other.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 1654

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 21-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dan Bensky et al., Hson-Mou Chang et al., Chu et al., CN 1047806 or EP 441278.

The teachings of the references are above. The claims are obvious since the extract is purified by known techniques. It would clearly have been within the purview of the skilled artisan to purify the claimed extract using standard biochemical extraction techniques for plants to yield the claimed invention.
